

Google Ads API Design Documentation

Application for Developer Token — Basic Access

Company Name

Geeko Digital Media

Business Model

Geeko Digital Media is a digital marketing agency specializing in paid media management for franchise and multi-location businesses. We manage Google Ads accounts for several clients including:

- Radiant Waxing (Customer ID: 700-880-1468)
- Amazing Lash Studio (Customer ID: 518-439-8848)
- Drybar (Customer ID: 569-257-6556)
- The Joint Chiropractic (Customer ID: 480-594-1762) — MCC with 109 franchise locations
- Paused Studio (Customer ID: 945-653-4996)

All accounts are owned by our clients and managed under our agency's MCC (Manager Account). We only manage Google Ads for contracted clients and do not resell API access to third parties.

Tool Name

3nzo — AI-Powered Paid Media Command Center

Tool Access/Use

3nzo is an internal agency tool used exclusively by Geeko Digital Media employees to:

- 1. View Performance Data** — Unified dashboard displaying metrics across all managed accounts including impressions, clicks, conversions, spend, CTR, CPC, CPA, and Search Impression Share.
- 2. Generate Reports** — Visual reports with date range selection, filterable by account, campaign status, and campaign name. Reports can be exported for client presentations.
- 3. AI-Assisted Queries** — Natural language chat interface allowing team members to ask questions like "What's Radiant Waxing's spend this week?" or "Show top performing campaigns."
- 4. Campaign Management** — Ability to pause/enable campaigns, adjust daily budgets, and modify bids directly from the tool (with confirmation flows to prevent accidental changes).
- 5. Automated Monitoring** — Daily sync of performance data at 6:30 AM to maintain up-to-date reporting.

Access Control:

- Only authenticated Geeko Digital Media employees can access the tool
- The tool is hosted at <https://3nzo.geekodmedia.com> (internal access only)
- Clients do not have direct access to the tool; they receive exported reports

Tool Design

Architecture

Data Flow

Reading Data (Reporting):

- 1. Daily scheduled job pulls metrics from Google Ads API using GoogleAdsService
- 2. Data is transformed and stored in Neon PostgreSQL (star schema)
- 3. Dashboard UI queries the database to display performance metrics
- 4. AI chat queries the database to answer natural language questions

Writing Data (Mutations):

- 1. User initiates action in UI (e.g., "Pause Campaign X")
- 2. Confirmation dialog shows details and requires explicit approval
- 3. API call is made to Google Ads API (CampaignService, AdGroupService)
- 4. Mutation is logged in our database for audit trail
- 5. UI reflects the change after confirmation from API

API Services Called

Read Operations (Reporting)

Service	Resource	Purpose
GoogleAdsService	customer	Pull account-level performance metrics
GoogleAdsService	campaign	Pull campaign-level metrics and status
GoogleAdsService	ad_group	Pull ad group-level metrics and bids
GoogleAdsService	search_term_view	Analyze search query performance
CustomerService	customer	Retrieve account hierarchy for MCC

Write Operations (Mutations)

Service	Operation	Purpose
CampaignService	MutateCampaigns	Pause/enable campaigns
CampaignBudgetService	MutateCampaignBudgets	Adjust daily budgets
AdGroupService	MutateAdGroups	Modify ad group bids and status

GAQL Queries Used

Account Performance:

```
SELECT
  segments.date,
  metrics.impressions,
  metrics.clicks,
  metrics.cost_micros,
  metrics.conversions,
  metrics.search_impression_share,
  metrics.search_budget_lost_impression_share,
  metrics.search_rank_lost_impression_share
FROM customer
WHERE segments.date DURING LAST_30_DAYS
```

Campaign Performance:

```
SELECT
  campaign.id,
  campaign.name,
  campaign.status,
  campaign_budget.amount_micros,
  metrics.impressions,
  metrics.clicks,
  metrics.cost_micros,
  metrics.conversions
FROM campaign
WHERE segments.date DURING LAST_7_DAYS
  AND campaign.status != 'REMOVED'
```

Security & Compliance

1. **OAuth 2.0** — All API access uses OAuth 2.0 with refresh tokens stored securely in environment variables
2. **Principle of Least Privilege** — We only request scopes necessary for our operations
3. **Audit Logging** — All mutations are logged with timestamp, user, and before/after values
4. **Confirmation Flows** — Destructive actions require explicit user confirmation
5. **Rate Limiting** — We respect API quotas and implement exponential backoff
6. **Data Retention** — Performance data is retained for reporting; no PII is stored

Tool Screenshots

Screenshots are included as separate attachments:

- dashboard.png — Account Overview with KPIs and brand performance table
- campaigns.png — Expanded brand row showing individual campaigns
- chat.png — AI Chat interface with natural language query
- filters.png — Google Ads-style filters for accounts and campaigns
